HOUSEHOLDS BY PUBLIC ASSISTANCE INCOME IN THE PAST 12 MONTHS				
Total	3,967	100.0%	338	🟩
With public assistance income	156	3.9%	93	🟨
No public assistance income	3,811	96.1%	349	🟩
HOUSEHOLDS BY FOOD STAMPS/SNAP STATUS				
Total	3,967	100.0%	338	🟩
With Food Stamps/SNAP	337	8.5%	133	🟨
With No Food Stamps/SNAP	3,630	91.5%	384	🟩
HOUSEHOLDS BY DISABILITY STATUS				
Total	3,967	100.0%	338	🟩
With 1+ Persons w/Disability	1,280	32.3%	289	🟨
With No Person w/Disability	2,687	67.7%	361	🟩

Data Note: N/A means not available. Population by Ratio of Income to Poverty Level represents persons for whom poverty status is determined. Household income represents income in 2021, adjusted for inflation.

2017-2021 ACS Estimate: The American Community Survey (ACS) replaces census sample data. Esri is releasing the 2017-2021 ACS estimates, five-year period data collected monthly from January 1, 2017 through December 31, 2021. Although the ACS includes many of the subjects previously covered by the decennial census sample, there are significant differences between the two surveys including fundamental differences in survey design and residency rules.

Margin of error (MOE): The MOE is a measure of the variability of the estimate due to sampling error. MOEs enable the data user to measure the range of uncertainty for each estimate with 90 percent confidence. The range of uncertainty is called the confidence interval, and it is calculated by taking the estimate +/- the MOE. For example, if the ACS reports an estimate of 100 with an MOE of +/- 20, then you can be 90 percent certain the value for the whole population falls between 80 and 120.

Reliability: These symbols represent threshold values that Esri has established from the Coefficients of Variation (CV) to designate the usability of the estimates. The CV measures the amount of sampling error relative to the size of the estimate, expressed as a percentage.

🟩 High Reliability: Small CVs (less than or equal to 12 percent) are flagged green to indicate that the sampling error is small relative to the estimate and the estimate is reasonably reliable.

🟨 Medium Reliability: Estimates with CVs between 12 and 40 are flagged yellow-use with caution.

🟥 Low Reliability: Large CVs (over 40 percent) are flagged red to indicate that the sampling error is large relative to the estimate. The estimate is considered very unreliable.
